Saint John of Cross: Dark Night

O guiding night!
O night more kind than break of day!
O night that joined
Love with love,
Love in her lover transformed!
Translated by Eric Rosenbloom
copyright 1999

The Guiding Night belongs to a series of pieces inspired by poetry of St. John of Cross. These compositions explore instrumental sonorities that lie on the border of hearing. In *The Guiding Night*, violin predominantly produces colored noise. The concealed pitch becomes heard as the color of timbre. The electronic part uses the MAX/MSP implementation of the bowed and plucked string physical models designed by Stefania Serafin. The models are used to augment the sonorities of the physical violin through extending its registral and textural arenas. The models enable expanding the violin's parameters to unrealistic dimensions and consequently producing novel sonorities. Its signal additionally functions as a controller for individual parameters of the bowed and plucked string models. The DSP processing meets in Ableton Live via the MAX for Live bridge.

Performance notes

The notation system is divided into computer part and parts, which represent components of violin body: tail, bridge, fingerboard, strings, nut, and scroll. The notation system changes in course of the composition.

There are two gesture layers to be read simultaneously. One signifies where on the violin the gesture should be performed, and the other suggests what particular string or notes should be bowed. Accidental harmonics and squeaks are desired as they contribute to the ethereal quality of the composition's sound.

Technical requirements

1 microphone, 1 Apple computer running Ableton Live 9 with Max for Live and MAX/MSP 6

- 1 Firewire interface
- 1 stereo audio playback system

MAX/MSP physical models of plucked and bowed strings designed by Stefania Serafin can be provided upon request.

Duration: upto 10 minutes
